

How to change your default e-mail program in MAC

Step 1. Launch Apple Mail (Mail.app).

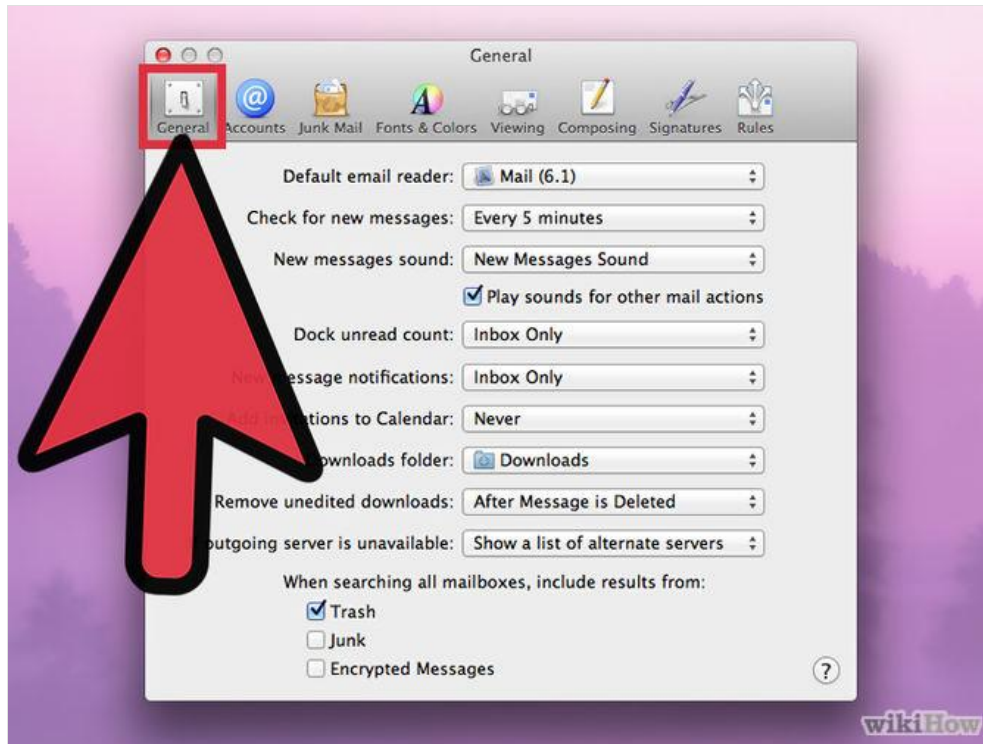

If you've not set up Mail, set up a dummy POP, IMAP, or Exchange account (it will try and verify, get an error, but still allow you to continue). Keep filling in information and hitting continue until you can get to the next step:

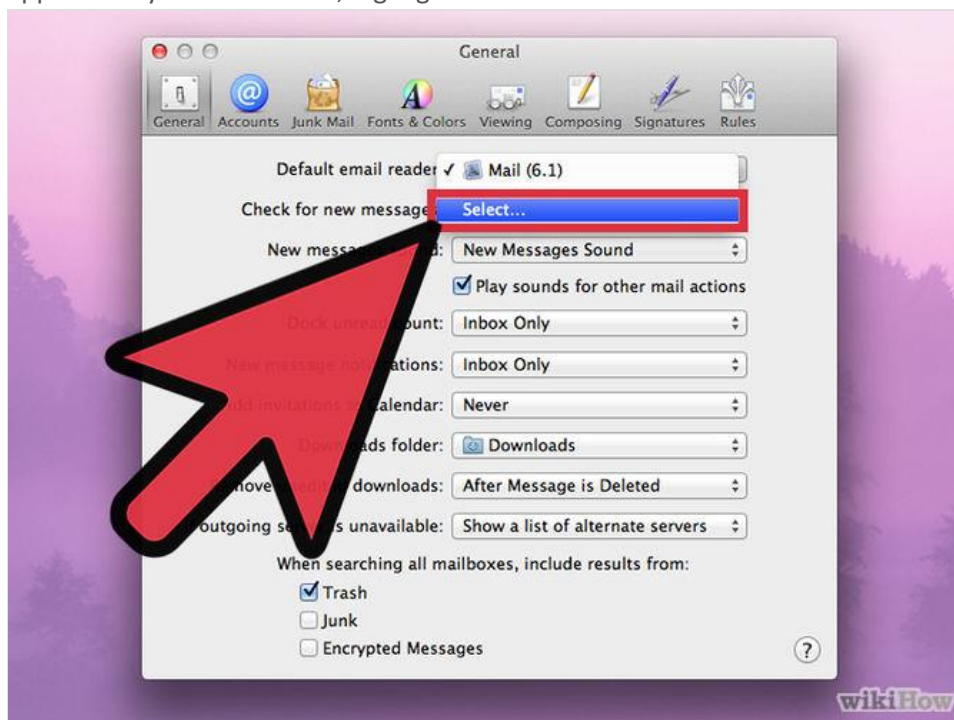

Step 2. Go to Mail > Preferences in the menu.

Step 3. Click on "General" tab.

Step 4. In the "Default Email Reader" pull-down menu, choose Select, browse to the email client application you want to use, highlight it and click "Select".

Step 5. Close dialog box and you're done!
